Responsibly steward water resources by focusing on efficiency, cultivating climate adapted landscape, minimizing potable water use, and maximizing use of reclaimed water.

To address the ongoing drought and comply with mandatory water conservation measures, the Institute took actions that resulted in a six percent decrease in campus water use in FY2015, led by a 32 percent reduction in water used for irrigation. With input from the campus community in town hall meetings, the Institute has planned a variety of conservation efforts to address water consumption in the Institute’s utility plants and buildings.
